---

Over 3 years of experience as a Software Developer. I provided support for large-scale applications, contributing solutions that improved their performance and response time. I developed new modules that enhanced client satisfaction due to their successful outcomes. Over time, I was selected to work on projects from scratch, where I learned and implemented agile methodologies and key processes for high-quality software development. I participated in the creation of new backend architectures, improving their scalability and maintainability. Additionally, I collaborated on the enhancement and implementation of automated testing with greater coverage, ensuring quality across all software layers.

## PROFESSIONAL EXPERIENCE

---

### Savne sas

Software Developer

Sogamoso, Boyacá

May 2022 – Oct 2024

- Provided support for PHP applications (from version 5.0 onward), achieving a 50% improvement in responsive design quality.
  - Worked on robust applications using Laravel (6.0+) and Vue.js (2 & 3), developing complex logic modules and integrating external services such as SimpliRoute. Additionally, I implemented interactive maps, generated large-scale reports and charts, and automated key processes.
  - Contributed to the design and implementation of an optimized layered architecture, enhancing maintenance, support, and scalability.
  - Developed user interfaces from Figma designs, ensuring responsive, accessible, and high-performance layouts.
  - Designed C4 models to represent the system architecture and extended them to the class level, providing a clear and structured design vision.
  - Provided training and mentorship to new developers, guiding them through the learning process. I reviewed their commits, optimized overly complex logic, corrected incorrect implementations, and shared best practices, code optimization techniques, and advanced development strategies.
  - Implemented new projects with a Hexagonal Architecture, leveraging APIs with JWT authentication.
  - Led the migration to Nuxt.js with TypeScript in the frontend, improving scalability and alignment with our needs. Additionally, I implemented i18n for bilingual applications.
  - Designed and implemented a sustainable and scalable frontend architecture, enabling efficient growth for high-potential projects.

---

## EDUCATION

---

### SENA

Technologist in Analysis and Software Development  
Achievements: Participated in SENASOFT Medellín 2019,  
representing SENA in software development competitions.

---

**Sogamoso, Boyaca**

December 2021

---

## ADDITIONAL SKILLS

---

Architecture & Modeling: C4 Modeling, ERD (Entity-Relationship Diagram), Flowcharts  
Front-End: HTML, CSS, Bootstrap, Tailwind CSS, Vue.js, Nuxt.js, JavaScript, TypeScript, jQuery  
Back-End: PHP, Laravel, PostgreSQL  
DevOps & Tools: Docker  
Version Control: GitHub, GitLab

---

- 
- **Effective communication:** I am able to express my ideas clearly, share them constructively, and collaborate with others to achieve better solutions.
  - **Mentorship and teamwork:** I love sharing my knowledge with my colleagues and am always willing to help. I contribute to the continuous improvement of the team, fostering learning and collective growth.
  - **Honesty and commitment:** I am an honest and transparent person in my work, always seeking to improve and learn from each experience.
  - **Proactivity and constant growth:** I always look for opportunities to enhance my skills and make meaningful contributions to the success of projects.
-
